

Notes for Dividing Decimals

1. Move the decimal in the DIVISOR to make it a whole number.
2. Move the decimal in the DIVIDEND the **EXACT** same number of places. (You may have to add 0's behind the number.)
3. Move decimal straight up into your answer.
4. Divide like normal. If the process does not give you a remainder of 0, then add 0's to the dividend and bring them down and continue 0's until the remainder is either 0 or the remainder starts to repeat.
